

# The Age of AI in Philanthropy: Transforming Fundraising

Cherian Koshy, CFRE, CAP<sup>®</sup>

 [linkedin.com/in/cheriankoshy](https://www.linkedin.com/in/cheriankoshy)

We called it

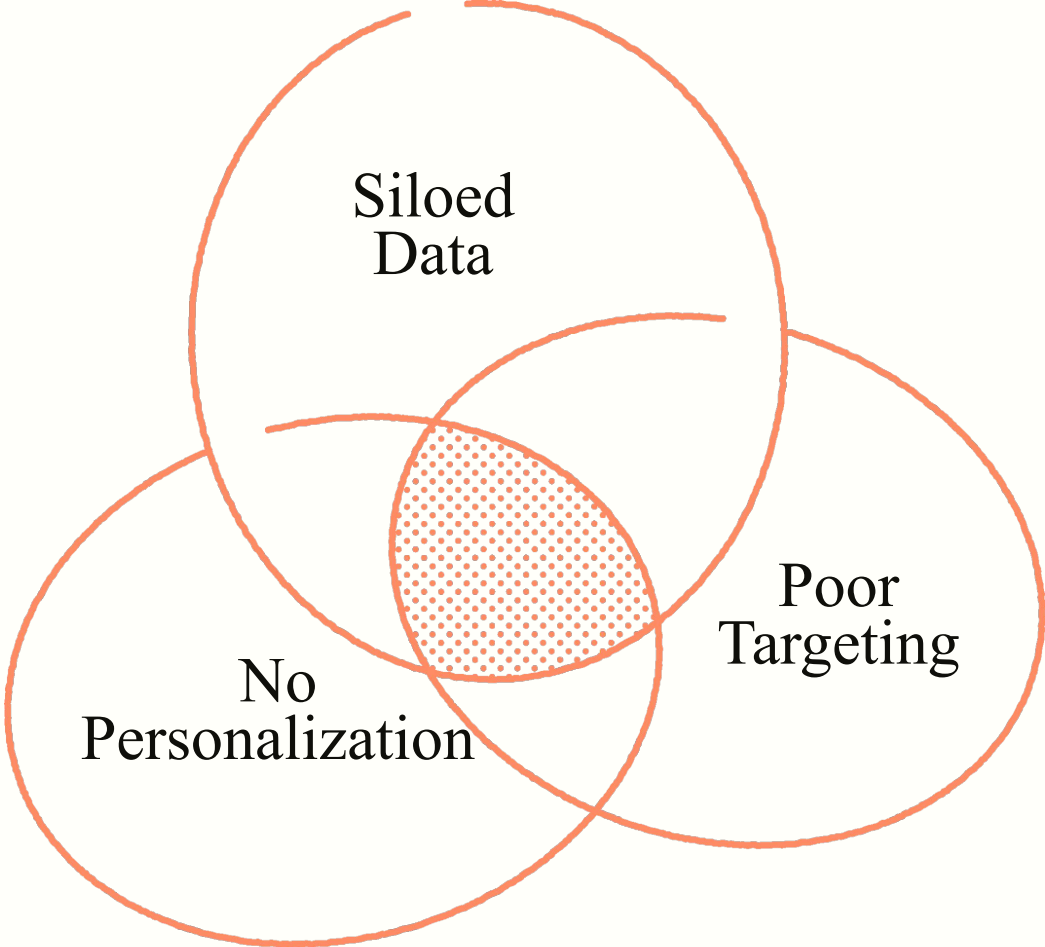

# Connected Software Revolution

The *revolution* is the result of holistically conceived software platforms (e.g. HubSpot, ) that hypercharge efficiency and fuel strategic decision making

There are more nonprofit organizations  
competing to attract *fewer donors*.

*Trust* in nonprofits is at an all-time low.

The demographic of donors is getting *younger* and more *digital* so how we engage them must change.

Siloed  
Data

No  
Personalization

Poor  
Targeting

We call this problem

# The Fundraising ~~Blindspot~~

Kindsight

# Lowest

donor retention rate all-time.

81%

Increase in nonprofits since 2000.

10.5%

Decrease in giving (*inflation-adjusted*).

+40%

Millennial household annual giving increased  
between 2016 and 2022...compared to  
Generation X (-4%) and Boomers (-12%)

# 54%

of millennials would give more if they were approached by causes in a different way.

7%

of organizations see themselves as highly effective building relationships with current mid-level donors.

3%

of fundraisers have confidence in their organization's ability to identify mass market donors who could become mid-level donors.

68%

Nonprofits use email marketing.

“Every fundraiser I know is stressed, understaffed, cannot fill open positions, struggling with unrealistic fundraising goals.”

We envisioned  
a different  
future.

# But First!

- Is AI coming for our jobs?
- Will this put fundraisers out of work?
- What will happen to nonprofits?
- How will funders adapt?

“I think what makes AI different from other technologies is that it’s going to bring humans and machines closer together. AI is sometimes incorrectly framed as machines replacing humans. It’s not about machines replacing humans, **but machines augmenting humans.** Humans and machines have different relative strengths and weaknesses, and it’s about the combination of these two that will allow human intents and business process to scale 10x, 100x, and beyond that in the coming years.”

—Robin Bordoli, ex-CEO, Figure Eight

How can I help you today?

**Write a spreadsheet formula**  
to convert a date to the weekday

**Recommend a dish**  
to impress a date who's a picky eater

**Write an email**  
expressing your love for your parents

**Write a thank-you note**  
to a guest speaker for my class

Large Language Models (LLMs) sit at the heart of GenAI, which in itself, can be categorised as a subset of Artificial Intelligence (AI).

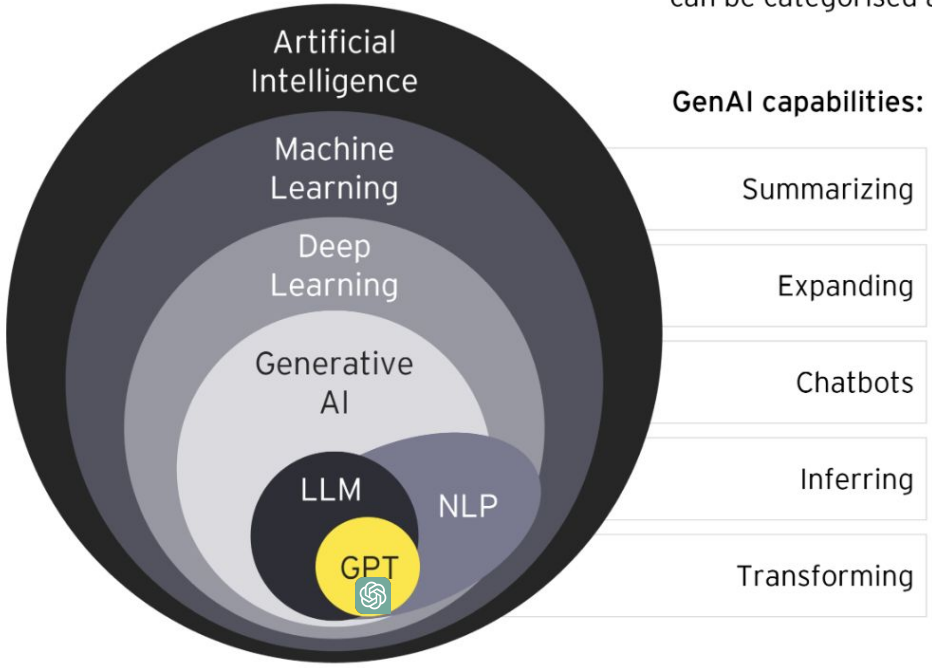

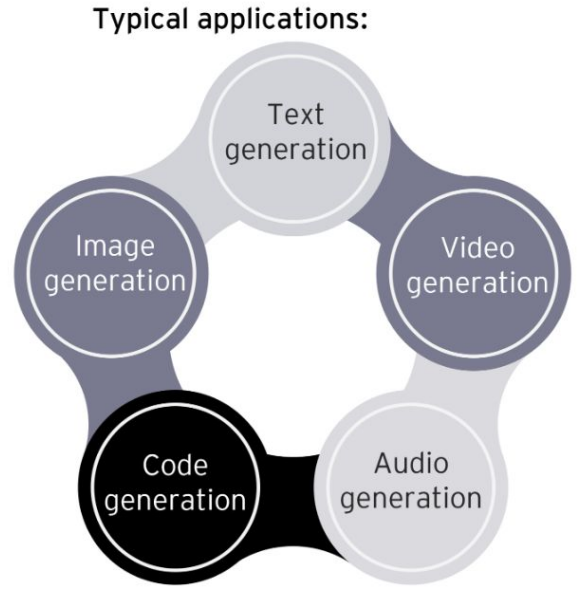

Figure 1. Understanding GenAI

Generative Pre-trained Transformer (GPT) uses a combination of LLM and Natural Language Processing (NLP) capabilities to provide a host of fundamental capabilities which find a host of generative applications.

**“The only real trend may be no trend. What’s best for any given model, dataset, and prompting strategy is likely to be specific to the particular combination at hand.” —Rick Battle & Teja Gollapudi, VMware**

**According to one research team, no human should manually optimize prompts ever again.**

**May 11, 1997**

May 11, 1997

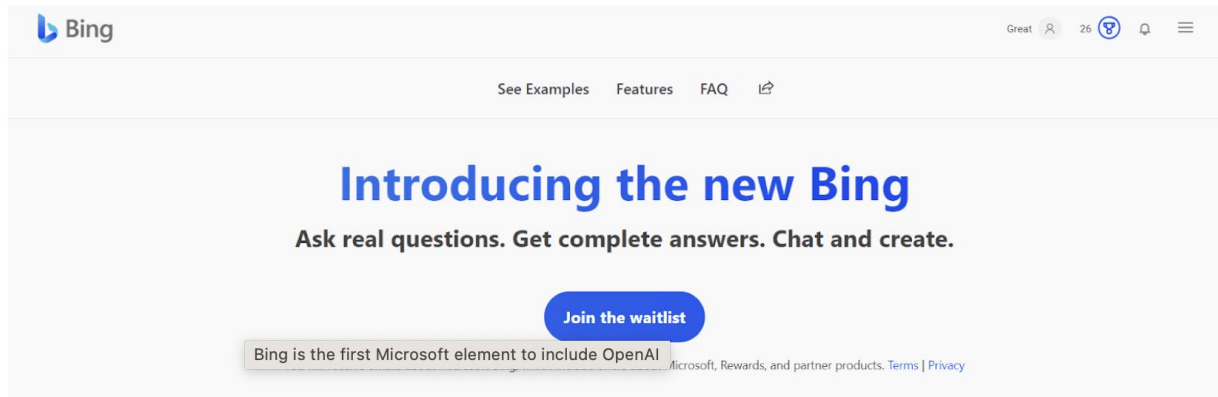

**February 16, 2011**

# February 16, 2011

# February 7, 2023

And on the 7th of February, 2023, Microsoft announced the new and improved Bing as expected.

**Microsoft CEO says OpenAI partnership will allow companies to access tools like ChatGPT in workplace emails, slideshows, and spreadsheets**

## Phone Script

Good afternoon,  
Mrs. Williams.

Thank you so much  
for taking my call. As  
mentioned, I would love  
to share more information  
with you about our capital  
campaign. This year we  
are planning to...

More than two-thirds (67 per cent) of U.S. office workers feel they are constantly doing the same tasks over and over again. On average, respondents say they **waste four-and-a-half hours a week** on tasks they think could be automated.

The top tasks global workers would like to automate include:

- emails (60%)
- inputting data/creating datasets (59%)
- scheduling calls and meetings (57%)

Thank *you!*

A close-up photograph of Michael Scott from the TV show 'The Office'. He is wearing a dark suit, a white shirt, and a patterned tie. He has a slightly frustrated or confused expression on his face, looking towards the camera. In the background, a computer monitor is visible on the left, displaying some text. The setting appears to be an office.
